

What are the **synthesis conditions** for In-doped $\text{La}_2\text{O}_2\text{Bi}_3\text{AgS}_6$ to achieve *superconductivity*?

Reasoning Paths

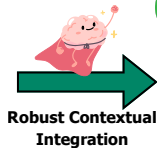

Synthesis Recipe Output

“Unknown layered host;
few parameters specified.”

Failed Recipe: Missing Parameters,
Misleading by Irrelevant Information

Adaptive Reasoning

“Method: Solid-state 725°C
Atmosphere: High vacuum (trace Ar)
Time: 24–44 hrs
Dopant Strategy: In_2S_3 precursor,
stoichiometric ratios”

Successful Recipe: Physics-informed
reasoning, full synthesis parameters
